

## **Quick Guide for AutoSwim**

- 1. Download the installation file from the homepage: <u>www.loligosystems.com/downloads</u>
- 2. Run the installation program. Follow the instructions on the screen and then restart the PC.
- 3. Connect the green (wibu) copy protection dongle to a USB port on the PC.
- 4. Start the AutoSwim program and click *Settings* to verify that all DAQ-BT devices paired with the PC are also listed in AutoSwim.
- 5. Click *Calibration* to calibrate each swim tunnel/DAQ-BT.

≡ Settings			
Device setup		Misc.	
Perform hardware scan	Scan	Reset settings	Reset
Hardware found		Open log folder	Open
BTH-1208LS-5FA4			
BTH-1208LS-973E			

- 6. Click *Experiment* to start operating the swim tunnel motor.
- 7. Click *Log* to create a data file and start logging data from a swim tunnel. Please note that each data file logs data from one swim tunnel only.
